

### A Good Beginning Makes A Good End!

The Legioblock and Legiplate from Jansen Concrete Products is the optimal solution for rapid and flexible constructions. The blocks and plates are easily stacked and placed. This allows complete freedom to modify or expand walling or floor construction at any time and any place.

This ultimate flexibility and the sheer durability of the blocks and plates make for a highly cost-effective construction system. The Blocks and Plates have short delivery lead times and can be built into the structure straight off the truck. The fact that the blocks and plates can be removed and relocated at any time makes them ideal for both permanent and temporary applications.

## Legioblock® firewalls: optimum fire resistance!

The Legioblock® construction system is a quick and flexible solution for fire-safe site partitioning. Legioblock® firewalls prevent fire from spreading to other compartments, neighbouring buildings or storage facilities. With over four decades of experience, A. Jansen provides turn-key solutions including safety calculations, transport and construction.

Legioblock® firewalls stabilise the stored materials, preventing fire from spreading horizontally. The temperature rise on the non-exposed side of the concrete wall is so low, that fire propagation through heat transfer will not occur.

## Legioblock® heavy weight concrete blocks

Legioblock® are heavy weight interlocking concrete blocks. Easy to install, adjust, move or expand. The blocks are fire-resistant and can be built up to a height of 8.8 meters. The maximum height of the construction depends on the maximum reach of the crane on site.

Legioblock® are the ideal solution for the construction of storage bays, retaining walls, bunkers, partition walls, fire resistant walls, factory halls, industrial workspaces and many more. Thanks to its durability and flexibility, these blocks offer a highly cost-effective solution.

## Legioplate® heavy weight concrete blocks

Legioplate are heavy weight interlocking concrete plates. Each plate has a safe working load of 20 tons. The unique design of the Legioplate come from Europe where they have been successfully and widely used since 1937.

Legioplate® are the ideal solution for the construction of factory floors, parking lots, roads, market places, temporary building access roads, cycling paths, port facilities, road repair and many more.
